- Torch
- FM Radio
- Mobile Phone Charger
- Emergency Siren

A fundraiser for Hataitai School (and a portion of funds raised go towards a fellow primary school in Christchurch).

OFFICE USE ONLY: Order paid
 Order despatched

Recharging NZSC-011 Internal Battery

In order to re-charge your NZSC-011 internal battery please pull out the generator's winding lever and keep winding it for not less than 1 minute. A winding speed of not less than 130 rpm should be maintained for successful charging. During winding the generator charging light should be illuminated show successful charging.

Flashlight

NZSC-011 uses LED light bulbs as its light source, which draw little power and provide durable and reliable light. To turn on your flashlight please press its 'on - off' button on the centre top of the unit. Press this button again to turn off the light. Each time you charge your NZSC-011 for the minimum 1 minute period your flashlight will operate for no less than 30 mins. It will operate for a considerable period when the unit is fully charged.

Mobile Phone Charging

Your NZSC-011 has a special feature that allows you to charge your mobile phone if you have the correct type of charging adaptor. Included in your pack are 7 of the most common charging adaptors. We cannot include adaptors for all models of mobile phones as these change regularly. For phone charging simply,

- 1) Select the appropriate adaptor for your mobile phone. Attach it to the included charging lead and to your mobile phone.
 - 2) Charge your unit for an appropriate time of greater than 1 minute. The longer you charge, the greater the charge that will be transferred.
 - 3) Attach the charging lead to the charging port on your NZSC-011 unit and the charge from your unit will automatically be transferred to your mobile phone, as indicated on your phone's display.
- Each minute of NZSC-011 charging gives you approximately 2 minutes of calling time or 25 minutes of standby time, (depending on battery condition).

FM Radio

Frequency range: 87.5 - 108 MHz

Once your NZSC-011 is charged you can turn 'on' and 'off' the radio, and control the volume, using the switch on the side of the unit. You then scan stations using the 'auto scan' button on the top of the unit. For each minute winding the generator (at 130 rpm) the radio function will last for approximately 30 minutes, depending on the volume level.

Emergency Siren

This function is activated by the small black switch on the side of your NZSC-011 unit. It gives both an audio and visual warning that you may require attention. It is suggested that this function be used only in times of emergency.

Caution

- Ambient temperature: 10 - 40 degrees C
- Storage temperature: 20 - 45 degrees C
- Do not expose your NZSC-011 under direct sunlight for long periods, or any heat source.
- Do not operate this unit in a service station or any gas filling area where flammable gas is present.
- Do not use solvent based cleaners to clean your NZSC-011.
- Do not point your flashlight directly into people's eyes.

Number of torches _____ x\$40 +freight* = _____ amount to pay

I want to pay by

- Cheque *Make cheque out to Hataitai School, post to Hataitai School, Arawa Rd, Hataitai, Wellington*
